E-mail: danette_dillow@madpi.com

You may leave your reservation on voice mail. Please leave the name(s) of those attending in your group along with a return phone number and your menu choice.

Topic

This session provides basic to intermediate level information directed towards IS professionals.

In today's environment, companies and their competitors are starting to recognize that corporate information is a valuable asset. They are also recognizing this same information can also be used as a strategic weapon to generate both corporate gains and losses. Hackers have known these facts for some time, and may even know more about you and your company than you do about yourself. Ask yourself, "Am I or my company ready to withstand an attack from a hacker?"

This session prepares the participants to answer this question by looking at the following additional questions. What really is a hacker & how do they work? What areas of my company are hackers most likely to exploit? Are their ways to start corrective action? Will knowing how hackers really work help me to prevent an attack? As these questions are analyzed, participants will receive information to help in addressing the risks associated with attacks by hackers

Speaker Background

Jim has been an information systems & technological audit professional throughout most of his 20+ year business career, including time in the public accounting, distribution, utility, and banking industries. Over this period, Jim has overseen the development & execution of many different audit approaches for "first-time-ever-audited" or "high-tech" business processes. Some of these approaches, relating to data security, application systems development, and telecommunications, have been published in various periodicals. At past presentations, Jim has shared the marquee with such notable persons as Bill Gates, former President Jimmy Carter, John Glenn, Scott Charney, and Kim Clancy, among others.

Jim is a Certified Information Systems Auditor, and a past President of ISACA's Atlanta Chapter. He currently consults with Covenant Health Management in Knoxville, TN on various issues related to implementing newer computer technologies
